The proposed amendments will not be entered because they raise new issues that would require further consideration. For example, "said access data being sent from an access device to the terminal".

Applicant argues that Norris does not teach the terminal signaling current access data to the service computer. Examiner respectfully disagrees. Norris teaches (col. 2, lines 15-31) that the subscriber sets-up Internet session such as log on, password (col. 2, lines 51-66) which reads on the claimed "the terminal signaling the current access data to a service computer of the telecommunications network". The same response would apply to Applicant's arguments with respect to claims 10, 12, 13, 14, and 15. Furthermore, Applicant argues that Norris does not teach the current access data being sent from the Internet / access device to the terminal. This new limitation is introduced by the after final amendment in claim 11.
